Work Experience

Arc Automation Consulting Ltd

february 2024-Current

Software Developer

Calgary, AB

- Implemented real-time PLC data logging to CSV files using **JavaScript** in NodeRED, improving team data tracking.
- Designed iLogix software interface using **Figma** to streamline software flow visualization, improving user experience.
- Developed **HMI** graphic templates utilizing FactoryTalk View, simplifying gas plant facility control for field operators.

Capdexs

July 2023 - february

Full-stack Developer

Calgary, AB

- Developed login/sign-in, landing and financing pages with **React** and **TypeScript**, creating user-friendly experience.
- Implemented filtering, sorting, pagination in **REST API**, optimizing system performance.
- Integrated security measures (encryption, data sanitization, rate limiting, etc.) using **Node.js** for a secure system.

Projects

TourQuest

ReactJS | PostgreSQL | NodeJS

- * Built a dynamic full-stack web app for tour reservations using the **PERN** stack, structured under **MVC** architecture.
- * Utilized **PostgreSQL** to implement fast and scalable **CRUD** operations, ensuring effective data storage.
- * Implemented **RESTful API** design, **JWT** authentication, and Stripe integration for credit card payments.

Musical fountain project

Python | Raspberry Pi | Azure

- * Led a team of 5 in creating an Interactive Musical Fountain, recognized as the University's top project at the Career Fair.
- * Integrated **Raspberry Pi**, 12V Fountain, and **Python** for an innovative Musical Fountain synchronized with music.
- * Integrated **Azure** for real-time data streaming and device management, enabling seamless communication between the Raspberry Pi and cloud services.

Who Am I?

JavaScript | PHP

- * Developed the 'Who am I?' game in JavaScript, using **XMLs** for character data and strategic questioning for guessing.
- * Enabled real-time multiplayer using **Express.js** and **Socket.IO**, fostering smooth, interactive gameplay for two player.
- * Created a **PHP** data generator for user-generated character datasets, enhancing game dynamism.

Education

University of Montpellier

May 2023

Bachelor of Science, Computer Science

France

- Relevant Courses: Data Structures & Algorithms, Java, Web Applications, C++ Program Design, Big Data Analytics, Networking, Agile software development, Operating system.

Honors & Awards

Excellence Scholarship Recipient of a full university scholarship sponsored by Campus France to pursue studies in computer science at the University of Montpellier.

Technical Skills

Languages: Python, SQL, JavaScript, C# .

Developer Tools: Aws, Postman, Git, Junit.

Libraries/Frameworks: ReactJS, PostgreSQL, Spring Boot, NodeJS.

Languages

English, French, Arabic
