Professional Profile

Highly motivated recent Computer Science graduate from the University of Montpellier, France. Seeking an opportunity to kickstart my software engineering career with excitement. Skilled in React, JavaScript, Bootstrap, Oracle, MySQL, Java, Spring, and Docker. Passionate about innovative web development solutions. Eager to learn, grow, and collaborate in a dynamic environment. With a strong emphasis on teamwork and collaboration, I bring passion, technical expertise, and a relentless drive for excellence.

EDUCATION

Bachelor of Computer Science - University of Montpellier, Montpellier, France

2019 – 2023

Relative Courses: Algorithms & Data Structures, Project Management, System Design, and Object-oriented Programming.

TECHNICAL SKILLS

Programming Languages: Java, JavaScript, C/C++, Python.

Frameworks and Libraries: Spring, Bootstrap, Bash, React.

Operating Systems: Linux.

Version Control: Git, GitHub.

Testing: Unit Testing, Selenium.

Databases: SQL, MySQL, Oracle.

TECHNICAL PROJECTS

Events App (Personal Project) - Github

The Event App is a web application that allows users to browse and discover various events. It provides a user-friendly interface for viewing event details, filtering events by category, and signing up for events.

- Implemented the front-end using React.js to create dynamic and interactive user interfaces.
- Integrated Supabase to handle backend services, including data storage and authentication.
- Implemented filtering and sorting options to enhance user experience.
- Leveraged Docker to containerize the application, providing a consistent and portable environment for development and deployment across different systems.
- Technologies used: React.js, Supabase, Bootstrap, Git, Docker.

Who Am I? Project - Github

Our team of four colleagues collaborated to develop an exciting JavaScript-based board game called "Who Am I?". Throughout the project, we achieved significant milestones that transformed the game into an engaging experience.

The key highlights of our journey:

- **Single-Player Foundation:** We commenced by laying the groundwork for the game, creating a captivating single-player version. This initial phase set the stage for subsequent advancements.
- **Comprehensive Character Generator:** In the second phase, we constructed a powerful generator capable of producing a JSON object containing an extensive range of character information. This included essential details like photos, names, and even unique traits such as hair color.
- **Seamless Multiplayer Experience:** Taking the game to new heights, we focused on enhancing accessibility in the third phase. Through the integration of Express.js, Socket.IO, and npm, we enabled real-time interaction between two players. This transformative step created an immersive environment that facilitated lively gameplay and unforgettable moments.

Musical Fountain Project - Github

The Musical Fountain app was developed as part of the interactive musical fountain project, enabling users to create captivating visual displays by controlling the timing and intensity of synchronized water jets with the music.

The key features of the project:

- Synchronization: The app synchronizes the water jets with the music, ensuring a seamless and visually captivating experience.
- Intuitive Controls: Users can easily control the timing and intensity of the water jets through an intuitive interface.
- Music Selection: The app allows users to select and play music from their preferred sources, enabling them to customize their fountain experience.
- Language and Framework: Developed using Python, the app leverages libraries such as Librosa and Matplotlib for audio processing and visualization.

AWARDS & CERTIFICATIONS

Excellence Scholarship, Campus France **2019 – 2023**

Excellence Scholarship recipient of a full university scholarship sponsored by Campus France to study computer science at the University of Montpellier.

VOLUNTEERING

Association Humanitaire De Montpellier, Montpellier, France **2022 – 2023**

INTERESTS

Traveling, Video Recording and Editing, Technologies.
